

Océ Account Center Integration

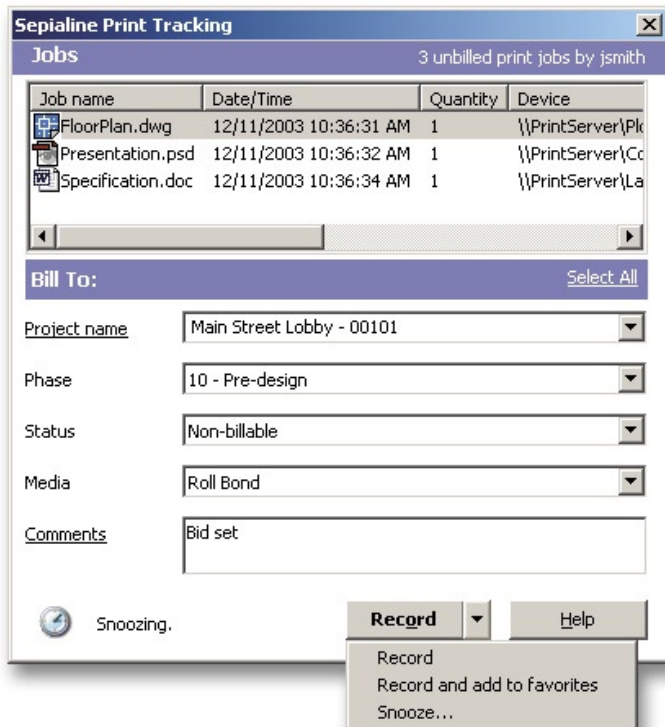

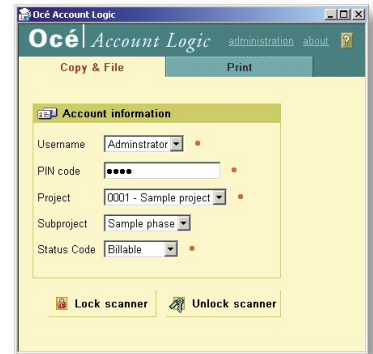

“Before adopting Sepialine, we had a huge hole in our reimbursables. With Sepialine print tracking and Océ integration, we were able to close the gap completely.”

Brian Darrow, PE
 President
 The Blueline Group

Océ Account Center Integration from Sepialine

Wide format output is one of the most significant office expenses in a design business. Integration software from Sepialine works with Océ Account Center to capture those expenses, delivering a total cost recovery solution for your wide format Océ equipment. Océ Account Center - part of the new Océ Power Logic® Controller XPe - introduces new accounting capabilities to Océ TDS systems, adding validation options and true lockout at the scanner. Sepialine™ Argos™ - the industry standard for cost recovery - enhances Océ Account Center, delivering flexible print tracking, centralized management, complete data validation and true scanner lockout - all with the innovative workflow that makes Sepialine Argos unique.

Features and Benefits

- Fast, flexible tracking for all Océ TDS printing, scanning and copying
- True lockout enforcement at the scanner
- Unobtrusive workflow doesn't compromise productivity
- Application-independent: works with all software
- Compatible with Océ Print Exec™ Workgroup, Océ Print Exec™ LT, Océ Repro Desk™ and more.

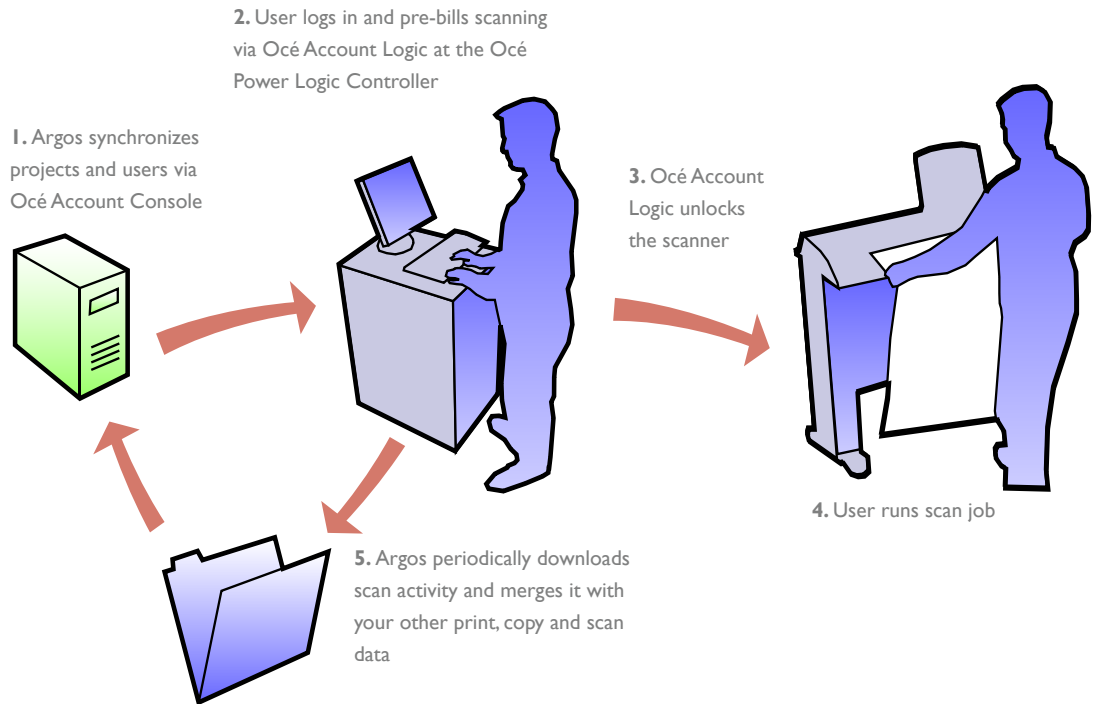

The Argos Cost Recovery Platform

Argos software from Sepialine is the leading cost recovery solution for architects, engineers and reprographic professionals, worldwide. The enterprise-grade Argos platform is built from the ground up to grow. With Argos Copy Tracking and Argos Data Exchange, businesses can track 100 percent of their expenses.

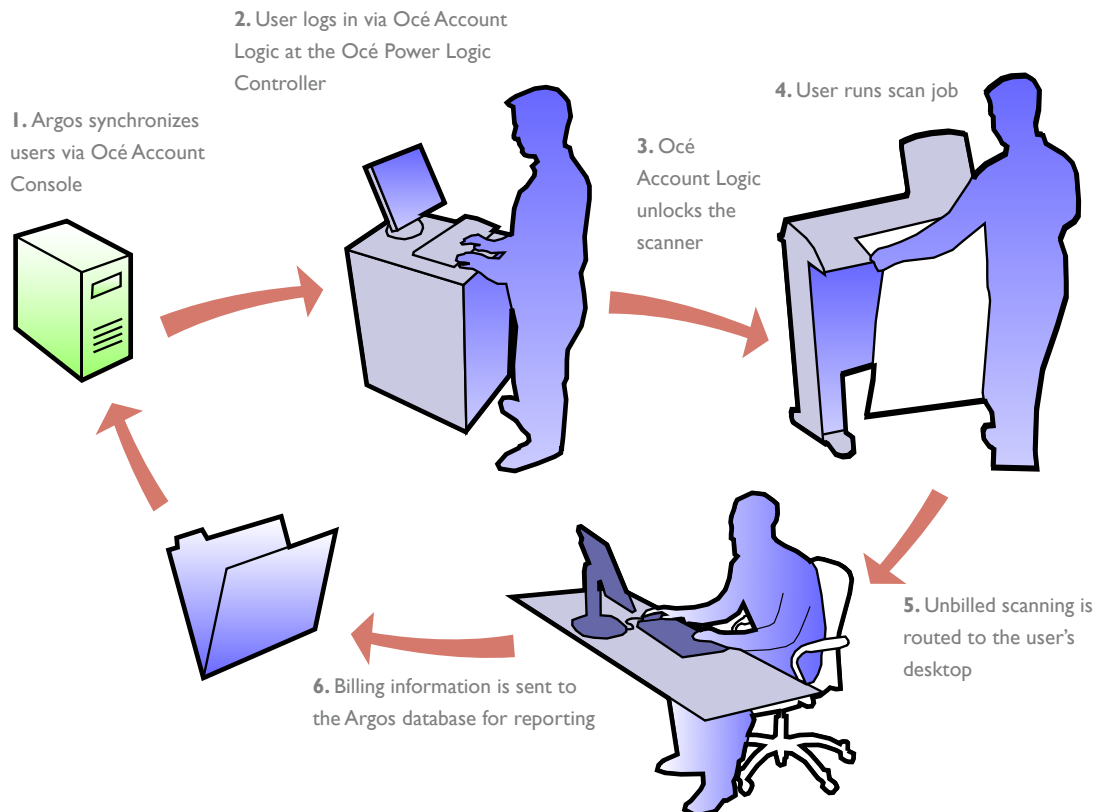

Scan Tracking With Account Center

Tracking your office scanning is easy and accurate with Océ Power Logic® Controller XPe and Argos software together. With two different ways to work, Argos integration for Océ Account Center delivers superior workflow and flexibility:

In **Kiosk Mode**, the scanner is initially locked. Users walk up to the Océ Power Logic Controller, where Sepialine Argos software has synchronized your users and projects. Keying in a username, password and project releases the scanner. Scan and billing data are stored on the controller until Argos downloads it on a daily basis.

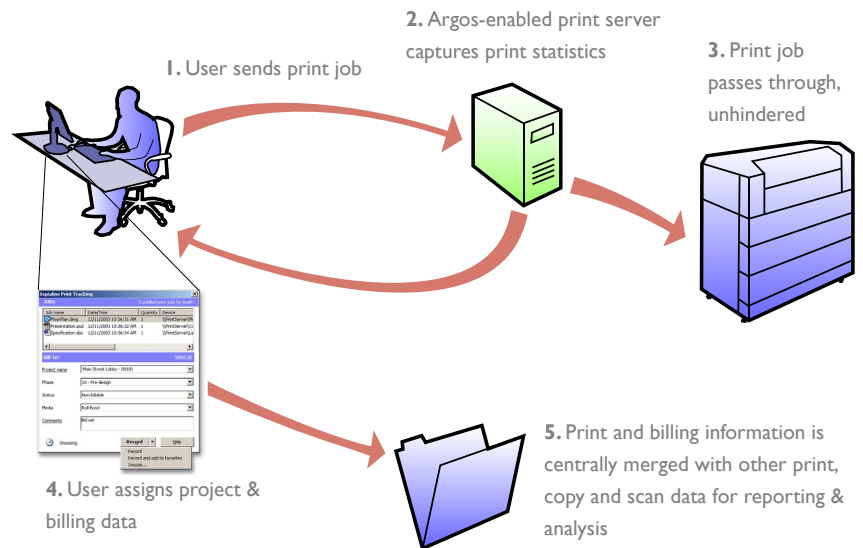

In **Desktop Mode**, billing takes place at the desktop with the power and flexibility of Argos billing dialog. Via the Océ Account Logic interface, users only need to identify themselves via a single PIN code. The scanner is unlocked, and the user scans. Project and billing information are assigned at the responsible user's desktop.

Print Tracking With Sepialine

Tracking Océ TDS printing leverages the innovative workflow that makes Argos the solution of choice for service professionals. With Argos, printing is never stopped or interrupted. Instead, printing is tracked at the server and sent to the user for billing. Productivity remains intact, so you'll have happy users and accurate data.

When you're ready to extend your cost recovery system, Argos is ready, too. Argos Data Exchange (ADX) is the flexible framework for connecting Argos to almost anything, including Océ Repro Desk™ and much more. And because Argos supports most popular accounting systems right out of the box, you'll get accurate project information from your users - every time.

Requirements

Cost Recovery Platform

- Argos 5.1 or higher
- Argos Data Exchange

Plotter / Controller

- Océ TDS400, TDS600 or TDS800
- Océ Power Logic® Controller XPe
- Océ Account Center software
